IGBC vs LEED vs GRIHA: Which Rating Suits Your Project?

A Comparative Technical Decision Matrix | Sustainergic Tech Whitepaper

1. Executive Overview & Rating Landscape

Navigating green building certifications in India requires balancing international tenant demands, capital expenditure, municipal development incentives, and operational lifecycle goals.
The three predominant frameworks are IGBC (CII), LEED (USGBC), and GRIHA (MNRE / TERI).

2. Rating Framework Comparison Matrix

IGBC (Indian Green Building Council): Best suited for private developers and residential/commercial projects targeting Indian climate conditions, local materials, and state fast-track approvals.
LEED v4.1 (USGBC / GBCI): Global benchmark preferred by Fortune 500 tenants, MNC IT parks, and REITs. Demands stringent ASHRAE 90.1 energy baseline modeling and strict Commissioning Authority (CxA).
GRIHA (Green Rating for Integrated Habitat Assessment): Mandatory for central government, PSU, and CPWD public infrastructure projects. Strongly prioritizes native vegetation, passive solar, and zero-discharge.

3. Financial & Government Incentives (FAR / FSI)

State policies in Punjab, Haryana, Rajasthan, UP, Maharashtra, and Karnataka offer 5% to 15% additional FAR / FSI (Free of Charge or discounted) for Gold / Platinum rated IGBC, LEED, and GRIHA assets.
Property tax rebates of 10% to 20% are available for compliant commercial developments.

4. How Sustainergic Tech Accelerates Your Rating

Our certified LEED APs, IGBC APs, and GRIHA CPs provide turnkey certification documentation, 3D energy simulation (eQUEST / EnergyPlus), daylight analysis, CFD airflow design, and Third-Party Commissioning.
